Sequence 225, Application US/09564805

Sequence 225, Application US/09564805

Ratent No. 633403

GENERAL INFORMATION:

APPLICANT: Tartigian, Sean V.

APPLICANT: Simard, Jacques

APPLICANT: Simard, Johanna M.

APPLICANT: Myriad Genetics, Inc.

TITLE OF INVENTION: Chromosome 17p-Linked Prostate Cancer Susceptibility

TITLE OF INVENTION: Cene and a Paralog and Orthologous Genes

TITLE REPERENCE: 2318-258

CURRENT APPLICATION NUMBER: US/09/564,805

CURRENT FILING DATE: 1999-11-06

PRIOR FILING DATE: 1999-11-06

Sequence 24, Application US/09564805

Sequence 24, Application US/09564805

Patent No. 6333403

GENERAL INFORMATION:

APPLICANT: Tang, David H.F.

APPLICANT: Feng, David H.F.

APPLICANT: Formans, Johanna M.

APPLICANT: Myriad Genetics, Inc.

TITLE OF INVENTION: Gene and a Paralog and Orthologous Genes

TITLE OF INVENTION: Gene and a Paralog and Orthologous Genes

CURRENT APPLICATION NUMBER: US/09/564,805

CURRENT APPLICATION NUMBER: US 60/107,468

PRIOR FILING DATE: 1998-11-06

PRIOR FILING DATE: 1999-11-05

NUMBER OF SEQ ID NOS: 240

SOFTWARE: PatentIn Ver. 2.0

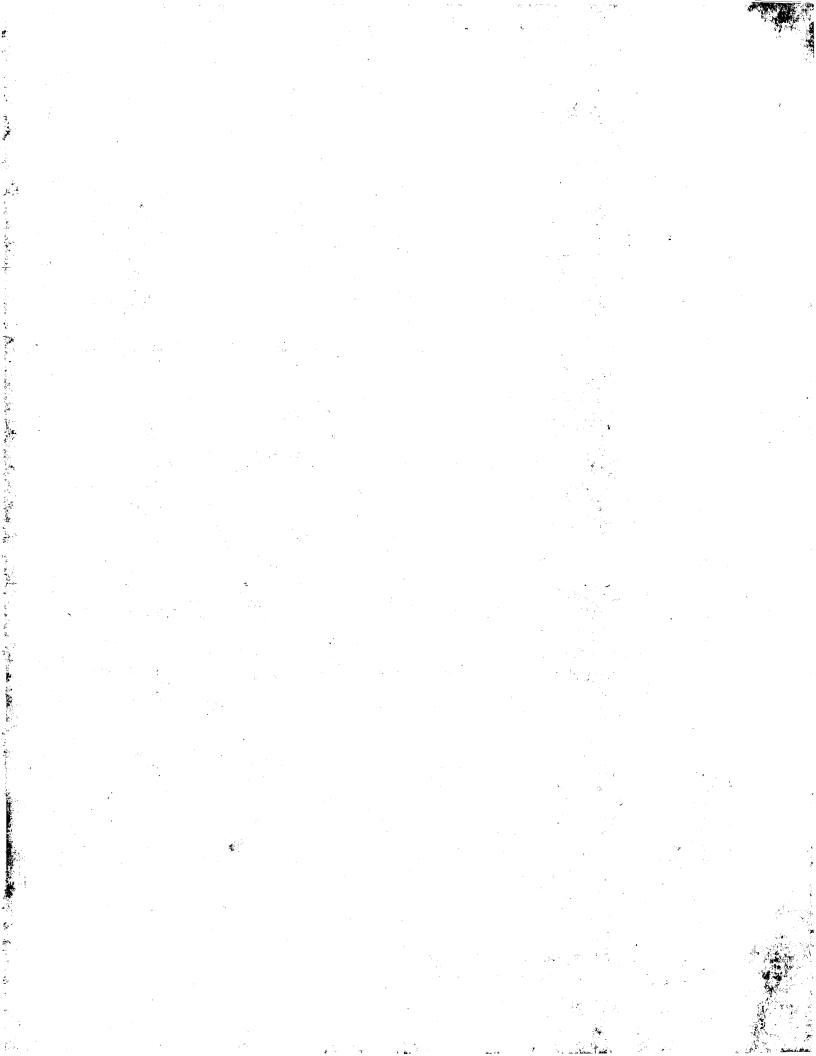

SEQ ID NO 24

LENGTH: 121

TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 10, Application US/09564805
Patent No. 633403
GENERAL INFORMATION; Sean V.
APPLICANT: Teng, David H.F.
APPLICANT: Simard, Jacques
APPLICANT: Rommens, Johanna M.
APPLICANT: Myriad Genetics, Inc.
TITLE OF INVENTION: Chromosome 17p-Linked Prostate Cancer Susceptibility
TITLE OF INVENTION: Gene and a Paralog and Orthologous Genes
